LIFE CORCONTICA

life for Krkonoše meadows

Project of the meadow and small
stream habitats restoration in
Site of Community Importance
Krkonoše Mountains.

(2012—2018)

We protect Dwarf gentian (Gentianella bohemica) at SCI Krkonoše.

We support traditional mountain meadow management practices.

We will restore most valuable species-rich meadows in the Giant Mountains.

We will fight against the spread of invasive plants.

We will create acceptable living conditions for the Bullhead in selected mountain streams.

We will find new ways of farm production sales and create farm plans.
